### Spinal Orthoses

#### ▼ Description

**Orthotics are rigid or semi-rigid appliances** used for the purpose of supporting or correcting a weak or deformed body part. They are also designed for restricting or eliminating motion in a diseased or injured part of the body.

An orthosis may be either prefabricated or custom fabricated. A prefabricated orthosis (off-the-shelf) is one which is manufactured in quantity without a specific patient in mind. A prefabricated orthosis may be trimmed, bent, molded (with or without heat), or otherwise modified for use by a specific patient (i.e., custom fitted). A custom fabricated orthosis (custom-made) is one that is designed for a specific individual. It may be required for fitting of an abnormal limb, contour, knee deformity or an unusual size. The use of a prefabricated orthosis may be precluded.

**Thoracic, lumbar and/or sacral spinal orthosis** are used to support weak spinal muscles and/or deformity, facilitate healing following an injury or surgical procedure on the spine or related tissue or reduce pain by restricting mobility of the trunk.

**Sacroiliac Supports** are fabric supports or braces. They do not restrict motion of the spine, and are used primarily to stabilize the sacroiliac and symphysis pubis joints following an injury or surgery.

A **Rib Belt** is used to provide support to the chest following injury or surgery to the ribs or chest wall.

A **Scoliosis brace** is a custom back brace which is used to assist in the correction of the curvature of the spine caused by Scoliosis, Kyphosis or Lordosis.

## ▼ Policy

A thoracic, lumbar and/or sacral spinal orthosis is considered **reasonable and necessary** for Members meeting coverage criteria.

## ▼ Policy Guidelines

Coverage Criteria:

Must be ordered by the Member's treating physician.

1. A spinal orthosis - **thoracic-lumbar-sacral orthosis** (L0450-L0492), lumbar orthosis (L0625-L0627), lumbar-sacral orthosis (L0628-L0640), sacroiliac supports (L0621 – L0624) or rib belts (L0220) are considered reasonable and necessary when it is ordered for one of the following indications:
  - a. To reduce pain by restricting mobility of the trunk; or
  - b. To facilitate healing following an injury to the spine or related soft tissues; or
  - c. To facilitate healing following a surgical procedure on the spine or related soft tissue; or
  - d. To otherwise support weak spinal muscles and/or a deformed spine.
  
2. A spinal orthosis - **scoliosis brace** is considered reasonable and necessary for members with one of the following diagnosis codes, including, but not limited to:
  - M40.00, M40.209 Kyphosis
  - M40.40, Q76.425  
-Q76.428 Lordosis
  - M41.20 Scoliosis, idiopathic
  - M41.00 Resolving infantile scoliosis
  - M41.00 Progressive infantile idiopathic scoliosis
  - M41.30 Thoracogenic scoliosis
  - M43.8X9 Curvature of the spine, unspecified
  - M41.40, M41.50 Scoliosis
  - Q67.5, Q76.3 Congenital postural scoliosis

## ▼ Exclusions:

A spinal orthoses used for the following conditions are generally considered not reasonable and necessary:

- Pregnancy
- Obesity
- Exclusive treatment of keloids or to reduce scarring following burns or surgical procedures.
- A sacroiliac support that is intended to be used for the sole purpose of allowing for participation in work, recreation or sporting activities prophylactic bracing or bracing to prevent or reduce the severity of injuries is not considered reasonable and necessary.
- Duplicate orthosis for use as spare devices.
- As a preoperative diagnostic tool prior to lumbar fusion surgery.

If a spinal orthosis is provided and the coverage criteria are not met, the item will be considered as not reasonable and necessary.

Maternity support garments, which are products that are designed to provide support for the abdomen during pregnancy, do not meet the definition of a brace. These products are coded using A9270 (NON-COVERED ITEM OR SERVICE). L codes for orthoses must not be used for these items.

There is no separate payment if CAD-CAM technology is used to fabricate an orthosis. Reimbursement is included in the allowance of the codes for custom fabricated orthosis.

A protective body sock (L0984) will be considered not reasonable and necessary since it is not required for the proper functioning of the brace.

Addition to CTLSO or scoliosis orthosis, cover for upright (L1120) is not considered reasonable and necessary.

Items coded as an A4467 are considered not reasonable and necessary since they are not rigid appliances and do not meet the definition of an orthosis.

### ▼ Coding Guidelines

1. Thoracic-lumbar-sacral orthosis (TLSO) described by codes, and L0450-L0492, lumbar orthosis (LO) described by codes, L0625 - L0627 and lumbar-sacral orthosis (LSO) described by codes L0628 - L0640 have the following characteristics:
  - a. Used to immobilize the specified areas of the spine.
  - b. Intimate fit and generally designed to be worn under clothing.
  - c. Not specifically designed for Members in wheelchairs.
2. In addition to (1) and (2), the body jacket type orthosis (, L0458-L0464, L0480-L0492, L0639, L0640) are characterized by a rigid plastic shell that encircles the trunk with overlapping edges and stabilizing closures and provides a high degree of immobility. The entire circumference of the plastic shell must be the same rigid material.
3. For an item to be classified as a TLSO the posterior portion of the brace must extend from the sacrococcygeal junction to just inferior to the scapular spine. This excludes elastic or equal shoulder straps or other strapping. The anterior must at a minimum extend from the symphysis pubis to the xiphoid. Some TLSOs may require the anterior portion to extend up to the sternal notch.
4. A flexible garment which is made primarily of elastic material (e.g. neoprene or spandex [elastane, Lycra], is billed with code A4467. These items were previously billed with code L0450, L0454, L0625, or L0628 and if a modifier is used, the GY modifier.
5. Codes L0450, L0454, L0455, L0621, L0625, and L0628 may only be used for orthosis that are made primarily of nonelastic material (e.g., canvas, cotton or nylon) or that have a rigid posterior panel. (Refer to the Documentation Requirement section of the LCD for instructions concerning use of the CG modifier for these products in cases where modifiers are utilized.

6. A spinal orthosis can be designed to control gross movement of the trunk and intersegmental motion of the vertebrae in one or more planes of motion: Lateral/flexion (side bending) in the coronal/frontal plane, flexion (forward bending) or extension (backward bending) in the sagittal plane and axial rotation (twisting) in the transverse plane.
7. If the product does not provide control of motion in one or more planes or does not provide intracavitary pressure, then the item is not considered a spinal orthosis and should be coded as A9270.
8. Sagittal control is achieved by a rigid posterior panel.  
Coronal control is achieved by a rigid panel in the mid-axillary line which is either an integral part of a posterior or anterior panel or a separate panel.  
Transverse control is achieved one of several possible structural features:
  - a. A rigid panel in the upper sternal area which is an integral part of an anterior shell, or
  - b. A rigid panel in the upper sternal area which is rigidly attached to rigid abdominal or posterior panel, or
  - c. Rigid extensions from a rigid posterior panel to the upper anterior chest bilaterally.

Straps over the shoulders attaching to a posterior panel do not provide transverse control
9. A prefabricated orthosis is one which is manufactured in quantity without a specific Member in mind. It is preformed with a shape that generally conforms to the body part. A prefabricated orthosis may be trimmed, bent, molded (with or without heat), or otherwise modified for use by a specific Member (i.e., custom fitted). This fitting does not require expertise of a certified orthotist or an individual who has equivalent specialized training in the provision of orthoses to fit the item to the individual member. A preformed orthosis is considered prefabricated even if it requires the attachment of straps and/or the addition of a lining and/or other finishing work. Multiple measurements may be taken of the body part to determine which stock size of a prefabricated orthosis will provide the best fit. An orthosis that is assembled from prefabricated components is considered prefabricated. Any orthosis that does not meet the definition of a custom fabricated orthosis is considered prefabricated. (L0450, L0455, L0457, L0458, L0462, L0464, L0467, L0469, L0470, L0472, L0488, L0490, L0491, L0492, L0621, L0623, L0625, L0628, L0635, L0641, L0642, L0643, L0648, L0649, L0650, and L0651).
10. A custom fabricated orthosis is one which is individually made for a specific Member (no other Member would be able to use this orthosis) starting with basic materials including, but not limited to, plastic, metal, leather, or cloth in the form of sheets, bars, etc. It involves substantial

work such as vacuum forming, cutting, bending, molding, sewing, etc. It requires more than trimming, bending, or making other modifications to a substantially prefabricated item. A molded-to-patient-model orthosis is a particular type of custom fabricated orthosis in which either:

- a. An impression of the specific body part is made (usually by means of a plaster or fiberglass cast) and this impression is then used to make a positive model (usually of plaster) of the body part; or
- b. Detailed measurements are taken of the Member's torso and are used to modify a positive model (which has been selected from a large library of models) to make it conform to the Member's body shape and dimensions; or
- c. A digital image of the Member's torso is made using computer (CAD-CAM) software which then directs the carving of a positive model.

The orthosis is then individually fabricated and molded over the positive model of the Member.

There is no separate billing if CAD-CAM technology is used to fabricate an orthosis.

Classification as custom fitted requires substantial modification for fitting at the time of delivery in order to provide an individualized fit, i.e., the item must be trimmed, bent, molded (with or without heat), or otherwise modified resulting in alterations beyond minimal self-adjustment. Substantial modification is defined as changes made to achieve an individualized fit of the item that requires the expertise of a certified orthotist or an individual who has equivalent specialized training in the provision of orthotics such as a physician, treating practitioner, an OT or PT in compliance with all applicable Federal and State licensure and regulatory requirements.

For custom fabricated orthoses (L0452, L0480, L0482, L0484, L0486, L0622, L0624, L0629, L0632, L0634, L0636, L0638 and L0640), there must be detailed documentation in the treating practitioner's records to support the medical necessity of custom fabricated rather than a prefabricated orthosis as described in the Coverage Indications, Limitations and/or Medical Necessity section of the related LCD. This information will be corroborated by the functional evaluation in the orthotist's or prosthetist's records. This information must be available upon request.

Effective for claims with dates of service on or after July 1, 2010, the only products that may be billed using codes L0450, L0454-L0472, L0488-L0492, L0625-L0628, L0630, L0631, L0633, L0635, L0637, and L0639 for prefabricated orthosis are those that are specified in the PDAC contractor web site.

- Orthosis that are custom fabricated from raw materials and are dispensed directly to the member by the entity that fabricated the orthosis. These items do not have to be listed on the PDAC web site in order to be billed using a custom fabricated spinal orthosis code. However, the supplier must provide a list of the materials that were used and a description of the custom fabrication process on request.

Effective for claims with dates of service on or after July 1, 2010, prefabricated spinal orthosis and spinal orthosis that are custom fabricated by a manufacturer/central fabrication facility which have not received coding verification review from PDAC must be billed with code A9270.

#### ▼ Important Note:

Northwood's Medical Policies are developed to assist Northwood in administering plan benefits and determining whether a particular DMEPOS product or service is reasonable and necessary. Equipment that is used primarily and customarily for a non-medical purpose is not considered durable medical equipment.

Coverage determinations are made on a case-by-case basis and are subject to all of the terms, conditions, limitations, and exclusions of the member's contract including medical necessity requirements.

The conclusion that a DMEPOS product or service is reasonable and necessary does not constitute coverage. The member's contract defines which DMEPOS product or service is covered, excluded or limited. The policies provide for clearly written, reasonable and current criteria that have been approved by Northwood's Medical Director.

The clinical criteria and medical policies provide guidelines for determining the medical necessity for specific DMEPOS products or services. In all cases, final benefit determinations are based on the applicable contract language. To the extent there are any conflicts between medical policy guidelines and applicable contract language, the contract language prevails. Medical policy is not intended to override the policy that defines the member’s benefits, nor is it intended to dictate to providers how to direct care. Northwood Medical policies shall not be interpreted to limit the benefits afforded to Medicare or Medicaid members by law and regulation and Northwood will use the applicable state requirements to determine required quantity limit guidelines.

Northwood’s policies do not constitute medical advice. Northwood does not provide or recommend treatment to members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.
